列表

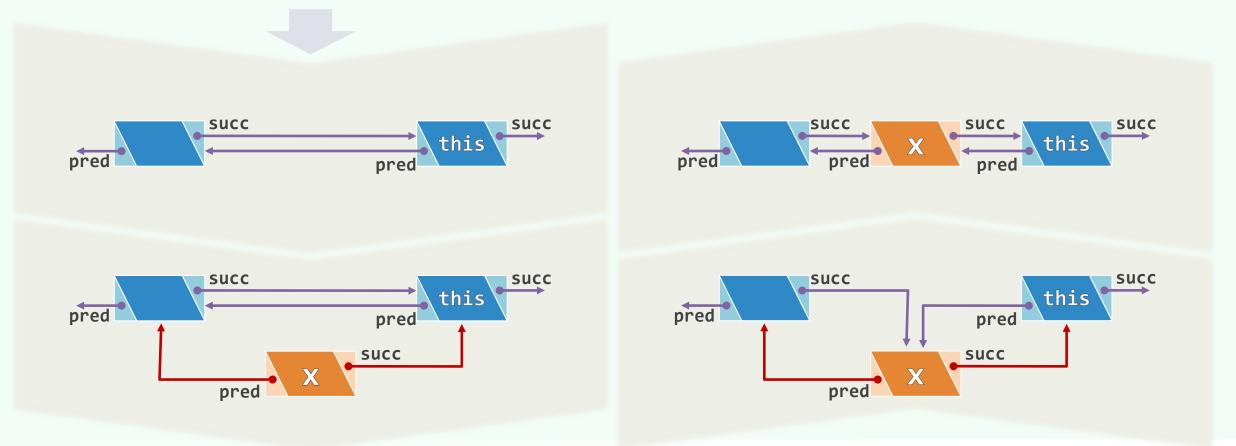

无序列表:插入与删除

邓俊辉 deng@tsinghua.edu.cn

插入:思路 + 过程

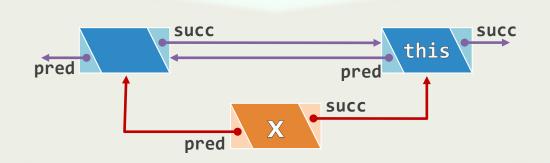

❖ template <typename T> <u>ListNodePosi</u><T> <u>List</u><T>:: //e当作p的前驱插入

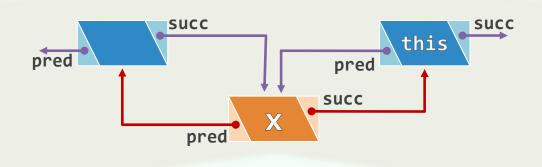

insert(T const & e, ListNodePosi<T> p) { _size++; return p->insertAsPred(e); }

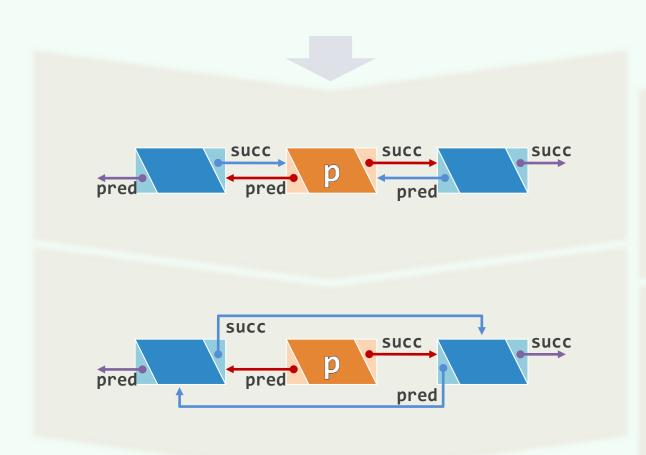

插入:实现

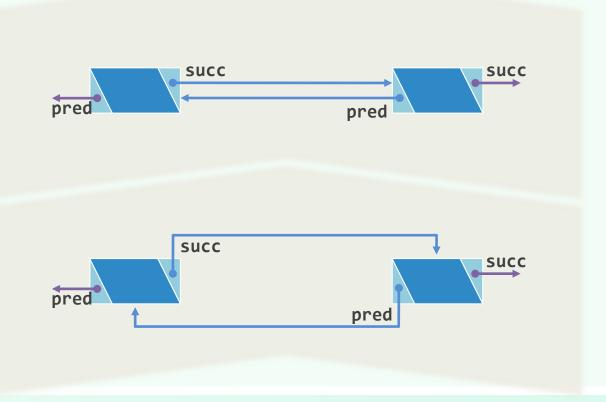

❖ template <typename T> //前插入算法(后插入算法完全对称)
ListNodePosi<T> ListNode<T>::insertAsPred(T const & e) { //o(1)
ListNodePosi<T> x = new ListNode(e, pred, this); //创建(耗时100倍)
pred->succ = x; pred = x; //次序不可颠倒
return x; //建立链接,返回新节点的位置
} //得益于哨兵,即便this为首节点亦不必特殊处理——此时等效于insertAsFirst(e)

删除:思路 + 过程

删除:实现

```
❖ template <typename T> //删除合法位置p处节点,返回其数值
 T List<T>::remove( ListNodePosi<T> p ) { //O(1)
    T e = p->data; //备份待删除节点数值(设类型T可直接赋值)
    p->pred->succ = p->succ;
    p->succ->pred = p->pred;
    delete p; _size--; return e; //返回备份数值
                                                 succ
           succ
                      pred
                                                           pred
```
